

SV TCL Completes Integration of Tokyo Cathode Laboratory New SV TCL Website went Live on September 16

-----MEDIA RELEASE FOR IMMEDIATE CIRCULATION-----

(TEMPE, ARIZONA, September 17, 2014) – SV Probe Pte. Ltd. (“SV TCL”), one of the world’s leading suppliers of high-performance probe cards, announced today that it has completed its integration of the probe card business and assets of Tokyo Cathode Laboratory (“TCL”) and launched a redesigned website at www.svprobe.com.

SV TCL KK began official operations in Japan on September 1, 2013 and to better reflect the synergies between the companies and recognize TCL’s reputation for high quality products, SV has rebranded itself SV TCL. Over the past year SV TCL has worked diligently to integrate TCL’s products, manufacturing processes and facilities with little or no disruption to customers. Another crucial element to the integration was the redesign of the SV TCL website which has been upgraded to a more current and functional platform with easier access to product information and optimized to function across all types of devices.

“SV TCL has worked incredibly hard during this time of integration to enhance our global infrastructure, determining the most efficient manufacturing processes and cost-effective locations in which to produce our products,” said Mr. Kevin Kurtz, President & CEO of SV TCL. “The new website is just one of the final integration steps and we look forward to the continuing success of this united business now and into the future.”

Probe cards are essential tools in the electrical testing of semiconductor wafers before they are diced, packaged and assembled in electronic products such as tablets, smart phones, computers and digital media players.
